

Topic: Animals including humans	Year 5 Age 9-10	Title: Different life cycles
Working Scientifically	Conceptual Knowledge Focus describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird	

Example

After studying life cycles, children were given fictional examples of 'merged' life cycles eg centaur, fawn etc. Children were asked to create a new 'species' which combined two types of animal and describe their life cycle.

Children meeting the objective would be able to demonstrate understanding of two different types of life cycle, for example, reptile and mammal.
