Key aims
To provide extra support to Teach First primary teachers to improve their science subject knowledge, ensuring that they can raise their pupils’ achievement and aspirations in science.

Teach First will do this by delivering a range of knowledge building sessions and opportunities in collaboration with PSTT Primary Science Teacher College members.

Outcomes
Teach First teachers and university partners will be linked with College members to create lasting resources and connections that will help boost science knowledge. These teachers will, in turn, be able to improve the educational outcomes within science of approximately 7,500 primary school pupils in 2013/14. Teachers will be encouraged to opt in for the PQSM in 2014/15.

Evaluation
Teach First will evaluate the success of the sessions/resources in collaboration with its university partners and College members.
